

Postpartum Depression in Illinois

What is Postpartum Depression?

- A mood disorder in women after childbirth
- Symptoms include feelings of extreme sadness, anxiety, and exhaustion that may make it difficult to complete daily activities
- The feelings are more intense and last longer than those of “baby blues,” a term used to describe worry, sadness, and tiredness many women experience after the birth of a baby
- It does not have a single cause, but results from a combination of physical and emotional factors

Why is it important?

- Without treatment, postpartum depression can last up to months or years
- There are long term consequences for mother’s and baby’s health
- It may interfere with the mother’s ability to connect with and care for her baby
- It may cause the baby to have problems with sleeping, eating, and behavior
- There are effective treatment options, including counseling and medication

In Illinois, **1 in 5** new moms experience postpartum depression

That’s **30,000** women each year

Enough to fill almost **100** commercial airplanes!

Women in Illinois are more likely to experience postpartum depression if they:

Live in a Rural Area

Do not have a high school degree

Experienced domestic abuse

Are low income

Are less than 20 years old

Had a low birth weight infant

Smoked before pregnancy

Risks are greater if you have **more than one** factor. For example, women who are younger than 20 and live in rural areas have the highest rates (about 2 in 5)

Postpartum Depression in Illinois

Many women are afraid to admit they have symptoms or to seek any help because of shame

Only **3 in 10** women with postpartum depression are diagnosed and only **2 in 10** receive treatment

Stressful events, relationship problems, little social support, poverty, and lack of education can intensify symptoms

Data Sources and Methodology

Illinois Pregnancy Risk Assessment Monitoring Survey (PRAMS), 2012-2013

PRAMS is a mail and phone survey of new moms that is completed 3-4 months after the birth of their baby. PRAMS is weighted to be representative of all Illinois new mothers. Women reported how often they felt sad/hopeless, whether they had been diagnosed with depression, and whether they were receiving any treatment for depression.
